# INTRODUCTION:

India is home to vibrant animal diversity, and although care is manually recorded, the Zoo has initially been set up to entertain people. Gradually, they have played an essential role in nature maintenance. The goal of the Zoo is conservation. It was easy because of the research done to computerize the management, maintenance and ticketing of the wildlife. Therefore, a database system called the zoo management system "ZMS" was developed. This is a web-based technology to manage.

We provide tickets for people, animal details, and those who accompany a visit to the Zoo. Their family. This web application provides a way to control effectively, record, and track zoo visitors. "The zoo management system effectively manages and processes all the zoo software functions; administration can store the ticket data of passengers visiting the Zoo. The System also keeps the ticket price.

Manage and calculate. The system requires one.

The administrator enters the ticket details. Print the number of adults and children, and the ticket and give it to that person. "The main advantage of this System is to protect the environment. Reduce the environment and the time required. This project uses PHP and MYSQL databases, and it has a module that is admin. All possible features such as validation, validation, security, etc., are considered.

## Project Description:

A zoo is a place where animals live in captivity and are put on display for people to view. The word “zoo” is short for “zoological park.” Zoos contain wide varieties of animals that are native to all parts of the Earth.

Though people have kept wild animals for thousands of years, those collections have not always resembled modern zoos. The first zoos were created as private collections by the wealthy to show their power. These private collections were called menageries.

**STRUCTURE OF THE PROGRAM :**

Software : Netbeans IDE, MySQL database.

Front end:- Html,css

Backend :- MySQL

NAME:ANURAG DESHMUKH
ROLLNO:8333
DIV:TYCS B

## MODULE DESCRIPTION

Home page : This is the home page of web application

LOGIN:- Here administrator do login USERNAME and PASSWORD. And administrator can perform CRUD OPERATION admin can ADD,UPDATE,DELETE operation.

Ticket:-Normal Ticket, Forign Ticket

Payment page:- passenger pay using credit/debit card. After the payment there will be a pop up message ticket book successfully.

## FUTURE SCOPE OF PROJECT :

- Easy to book tickets.
- Saves time and money.
- Provide Animal information.
